1. Overview & Access

ECOVENT Operations is a browser-based portal for managing the full duct manufacturing lifecycle — from customer enquiry through design review, accounts approval, order confirmation, production, and multi-trip dispatch.

Key principle: Enquiry ≠ Order ≠ Dispatch

A customer enquiry captures intent and drawings. An order is created only after design approval.
Each vehicle trip is a separate dispatch. One order can have many dispatch trips until fully delivered.

Open the URL provided by your administrator (e.g. *https://your-server/login*). Enter your **username** and **password**. Credentials are issued per user; they are not displayed on the login page. Use **Sign out** in the header when finished.

2. User Roles

Each login has one or more roles. Menus and records are filtered automatically.

Role	Access	Typical tasks
Admin	Full portal	All modules, clients, users, settings
Supervisor	Full portal	Create enquiries, assign design, oversight
Designer	Assigned enquiries	Design review, Excel import, submit to accounts
Accounts	Enquiries (approval)	PO workflow, approve design, return to design
Production	Orders	Production approval and progress
Dispatcher	Mobile app only	Field dispatch (see Mobile Dispatch guide)

Activity history records the **signed-in user** for every action (not a separate “acting as” selector).

3. End-to-End Workflow

- 1

New Enquiry — supervisor/admin selects client & project, uploads customer files.
- 2

Accept & assign design — intake completed; design engineer assigned (designer inbox).
- 3

Design review — duct extraction, Excel import, revisions (Rev 01, 02...); submit to accounts.

- 4 **Accounts / PO** — review and approve design for manufacturing.
- 5 **Convert to order** — production order linked to the enquiry.
- 6 **Production & dispatch** — shop floor progress; one or more vehicle trips until balance is zero.

Every step appears in **Delivery & Activity History** with user name, role, timestamp, and revision/trip where applicable.

4. Navigation & Display Views

Menu	Who	Purpose
Dashboard	Admin, Supervisor	KPIs, work queue, workflow audit
Clients	Admin, Supervisor	Customers, projects, contacts
Enquiries	Most office roles	Pipeline by stage; designers see assigned items
Orders	Admin, Supervisor, Production	Manufacturing and dispatch readiness
Dispatch	Admin, Supervisor	All vehicle trips (desktop)
Settings	Admin	Application information

Toolbar Actions (per screen)

Screen	Actions
Dashboard	All Enquiries · New Enquiry · Create Dispatch (when ready)
Enquiries	New Enquiry
Orders	Create Dispatch (first dispatchable order)
Dispatch	New Dispatch Trip

Display Views

On Enquiries, Orders, and Dispatch lists, switch between **Cards**, **Grid**, and **Kanban**. Your preference is saved in the browser.

Header

Notifications (bell) and **user menu** (name + sign out) are in the top bar on every screen.

5. Creating a New Enquiry

Admin / Supervisor: click **New Enquiry** from the Dashboard or Enquiries screen. Select an existing **client** and **project** from the directory (or add clients under **Clients** first).

Customer & contact

Field	Required	Description
Client / project	Yes	From client master data
Contact	Optional	Site contact from client record

Project Details

Field	Required	Description
Project Name / WO No	Yes	e.g. AIRMASTER-WO-900 — becomes order reference
Project Location	Yes	Site or city
Enquiry Date	Yes	Date enquiry received
Expected Completion	No	Target delivery date

Assignment

Field	Required	Description
Sales Person	Yes	Assigned sales representative
Priority	Yes	Low / Normal / High / Urgent
Source	No	Existing Customer, Referral, Website, etc.
Remarks	No	Scope notes, urgency, site constraints

Client input files

Upload customer drawings (PDF, images, Excel, etc.) on the create form or on the enquiry detail page. On submit:

- Generates a structured enquiry number (client + project sequence)
- Logs *Enquiry created* and file upload in activity history
- Opens the enquiry detail page for intake and design handoff

Important: No manufacturing order is created when the enquiry is submitted. The order is created only after design approval and explicit conversion.

6. Design & Accounts Workflow

The workflow stepper shows Enquiry → Design Review → Order → Manufacturing → Dispatch.

Supervisor / intake

Accept & assign to design completes intake and assigns the design in-charge in one step.

Designer

1. Import duct schedule (Excel) or enter extraction totals
2. Request revision (during in-review) if scope changes
3. **Submit to accounts** when engineering sign-off is ready

Accounts

1. PO for review → PO for approval
2. **Approve design** or **Return to design** (new revision)

Then **Convert to order** when design is approved.

7. Production & Activity Log

Production steps (on enquiry or order detail)

1. **Approve Production Start** — production manager authorises shop floor to begin (logged with name and date)
2. **Log Production Update** — record produced quantity (e.g. 12 / 18 qty)
3. **Mark Ready for Dispatch** — all items moved to ready stock

Activity history

The **Delivery & Activity History** section groups all events by phase:

Phase	Example events
Enquiry	Enquiry created

Design	Design review started, design updated, revision requested, design approved
Order	Converted to order
Production	Production start approved, progress updated, marked ready for dispatch
Dispatch	Dispatch Trip 1 created, Dispatch Trip 2 created, delivery completed

Each entry shows: action title, detail, **actor name**, **role**, **timestamp**, and revision/trip number where applicable.

The **Workflow Progress** summary strip shows the latest update per phase at a glance.

8. Order & Dispatch

Quantity tracking

Metric	Meaning
Ordered	Total on confirmed order
Produced	Fabricated quantity
Ready Stock	Available for dispatch
Dispatched	Already sent on previous trips
Balance	Remaining to dispatch

Dispatch workflow

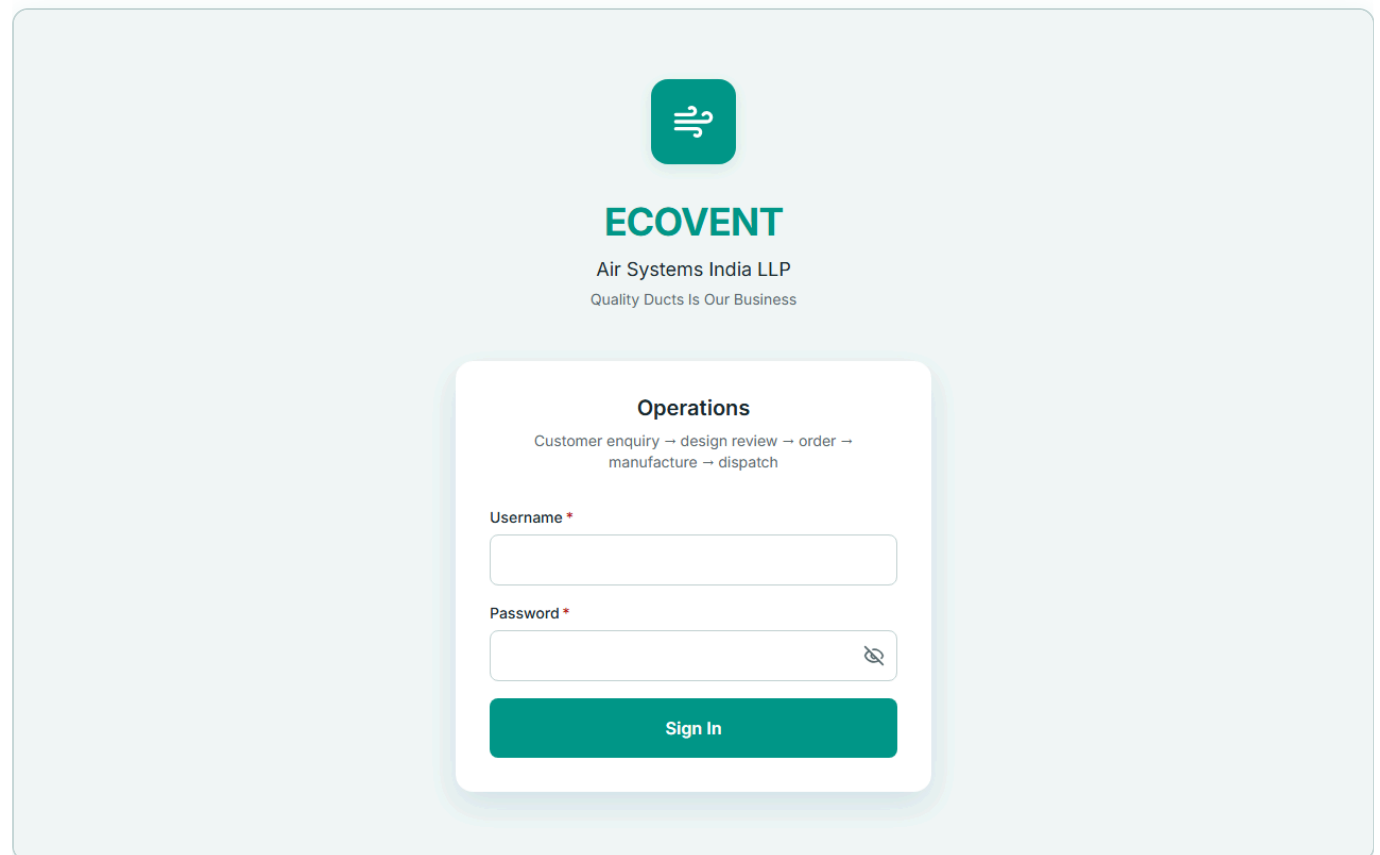

1. Select order from Dashboard, Orders, or Enquiry detail
2. Select items — use + / – per tag or Select All Available
3. Enter vehicle details — vehicle number, driver, transporter, date/time
4. Preview — verify quantities, area, and remaining balance
5. Confirm — dispatch number assigned, balances updated, activity logged as Dispatch Trip N
6. Share — WhatsApp, email, or PDF dispatch note

Rules: Cannot dispatch more than available per tag. Order becomes Fully Dispatched when balance reaches zero.

9. Screen Guide

Screenshots from the current teal-themed portal. Role badges show separate logins (admin, designer, accounts, production) — each user sees only permitted menus and data.

Login — per-user username and password (issued by administrator)

The screenshot displays a login interface for the 'Operations' role within the 'ECOVENT' system. At the top center is a teal square icon with a white symbol. Below it, the text 'ECOVENT' is prominently displayed in teal, followed by 'Air Systems India LLP' and the tagline 'Quality Ducts Is Our Business' in a smaller, lighter teal font. The main login area is a white rounded rectangle with a teal border. It features the title 'Operations' in bold, followed by a process flow: 'Customer enquiry → design review → order → manufacture → dispatch'. Below this are two input fields: 'Username *' and 'Password *', both with red asterisks indicating required fields. The password field includes a toggle icon for visibility. A teal 'Sign In' button is positioned at the bottom of the form.
