1. Overview

ECOVENT Mobile Dispatch is a **mobile app** built for warehouse staff and dispatch coordinators working on phones or tablets. It focuses on the core task: loading the right duct tags onto the right vehicle and sharing the dispatch note — without the full admin portal.

Same data as the web portal

Orders, balances, and dispatch trips are shared with the admin portal. Each user signs in with their own account. All authorised users can create dispatches and update trip status.

Capability	Mobile App	Admin Web Portal
Create dispatch trips	Yes	Yes
Update dispatch status	Yes	View only
Share WhatsApp / Email / PDF	Yes	Yes
Create enquiries & design	—	Yes
Production tracking	—	Yes

Use the **mobile web app** at `/m/login` on your server URL, or the **ECOVENT Dispatch APK** if your administrator provides one. Both use the same login and data as the admin portal.

2. Install on Mobile

Option A — Browser (recommended for HTTP / IP servers)

1. Open Chrome on the phone
2. Go to **your-server/m/login** (URL from administrator)
3. Sign in — optional: Add to Home screen for a shortcut icon

Option B — Android APK

If provided, install the APK as below. It loads the same dispatch UI from your server.

Android

1. Transfer the **ECOVENT Dispatch APK** file to the phone (email, WhatsApp, or USB)
2. Open the APK file and tap **Install**

3. If prompted, allow installation from unknown sources for your file manager
4. Launch **ECOVENT Dispatch** from the home screen

First launch

1. Open the app — the login screen appears
2. Sign in with the **username** and **password** provided by your administrator
3. You are taken directly to the Orders screen

Tip: Each dispatch operator should have their own login so actions are recorded against the correct user.

3. Login & User Access

Dispatch users sign in with a **dispatcher** account (username + password). The signed-in name appears in the header. Credentials are not shown on the login screen — request them from your administrator.

Dispatcher accounts can list orders with balance, create trips, update trip status, and share dispatch notes. Admin and supervisor accounts use the desktop portal for enquiries and production.

Tap the **logout** icon in the header to sign out.

4. Navigation

Tab / Screen	Purpose
Orders	Orders with balance remaining — search by order no. or customer
Dispatches	All vehicle trips — tap to view detail and share
Order detail	Qty summary, previous trips, New Dispatch Trip

During the dispatch wizard (select tags → vehicle → preview → confirm), the bottom navigation is hidden so the user stays focused on the current step.

5. Create a Dispatch Trip

- 1 **Orders** — pick an order with balance > 0
- 2 **Select Tags** — use large + / – buttons per duct tag; tap *All* to select full available stock; sticky bar shows selected qty

- 3 **Vehicle Details** — vehicle number, driver, mobile, transporter, loading date/time
- 4 **Confirm** — review trip qty and remaining balance; tap Confirm Dispatch
- 5 **Success** — dispatch number assigned; share or view dispatch note

Rules: Cannot dispatch more than available per tag. Tags are sorted numerically (Tag 1, 2, 3... not 1, 10, 11). Order balance updates after each trip.

6. Update Dispatch Status

On the dispatch detail screen, tap status buttons to progress the trip through the loading yard workflow:

Status	When to use
Loading	Vehicle at bay, loading started
Loaded	All items on vehicle, paperwork done
Dispatched	Vehicle left the factory
Delivered	Goods received at site

The current status is highlighted. Updates are saved immediately and visible to all users.

7. Share Dispatch Note

After creating a dispatch or from the dispatch detail screen, use the share panel:

Action	Result
WhatsApp	Opens WhatsApp with a pre-filled message: dispatch no., order, vehicle, driver, item summary
Email	Opens email client with subject and body
Download PDF	Generates a printable dispatch note PDF (same format as web portal)

Ideal for sending loading instructions to the driver or confirmation to the customer site contact.

8. Mobile UI Design

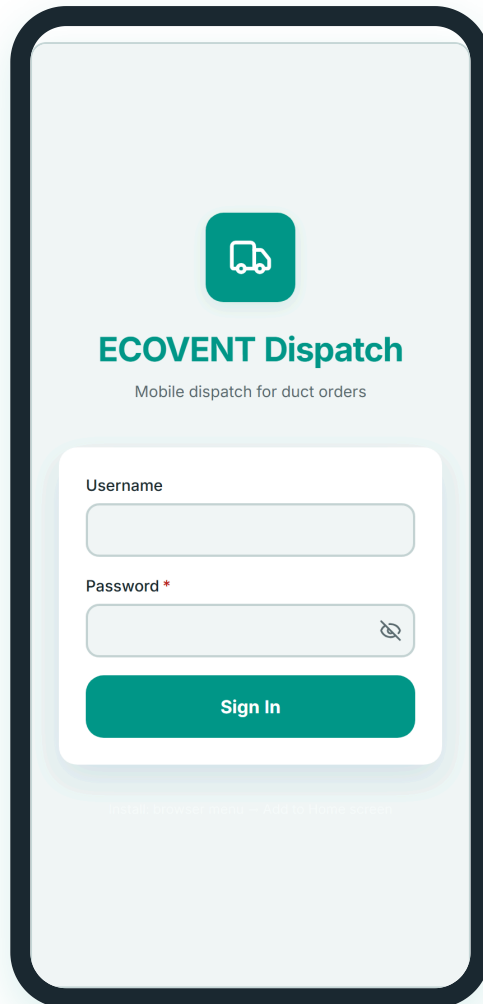

The interface is optimised for gloved hands, bright warehouses, and one-handed phone use:

- **56px touch targets** on + and – quantity buttons
- **Sticky action bars** — Continue and Confirm always visible at the bottom
- **Large typography** — tag numbers and quantities at 2xl–3xl size
- **Safe area support** — respects notches and home indicators on modern phones
- **Minimal chrome** — bottom nav only on list screens; wizard steps are distraction-free

9. Screen Guide

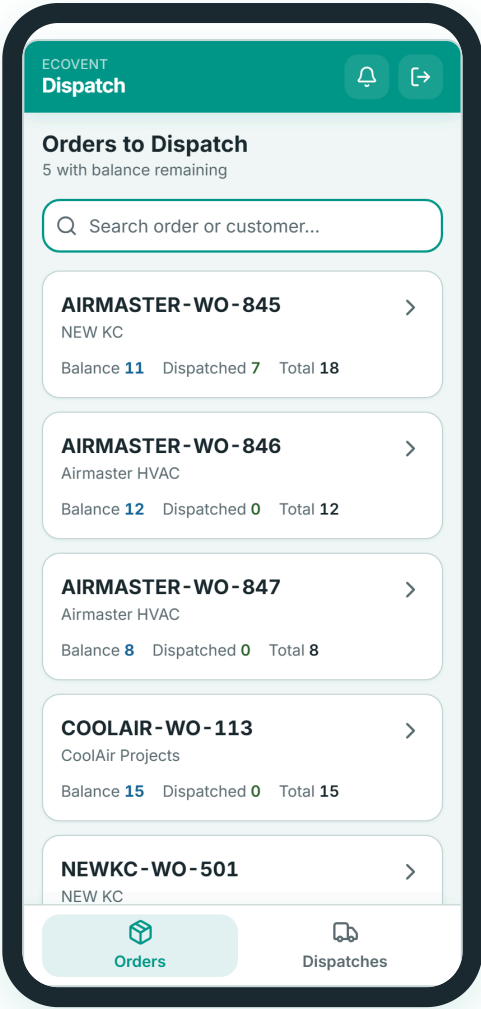

Screenshots from the ECOVENT Dispatch mobile app.

Login — username and password from your administrator

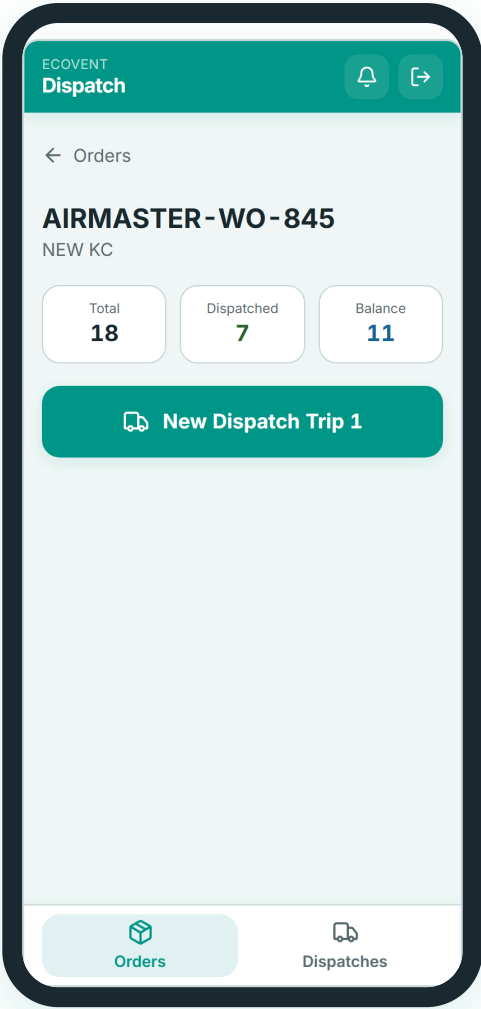

The image shows a mobile app login screen for 'ECOVENT Dispatch'. At the top, there is a teal square icon with a white truck symbol. Below the icon, the text 'ECOVENT Dispatch' is displayed in a bold teal font, followed by the subtitle 'Mobile dispatch for duct orders' in a smaller, lighter teal font. The login form is centered and consists of a white rounded rectangle. Inside this rectangle, there is a 'Username' label above a light gray input field. Below that is a 'Password *' label above another light gray input field, which includes a small eye icon for toggling visibility. At the bottom of the form is a teal button with the text 'Sign In' in white. The entire app interface is shown within a black rounded rectangle representing a smartphone.

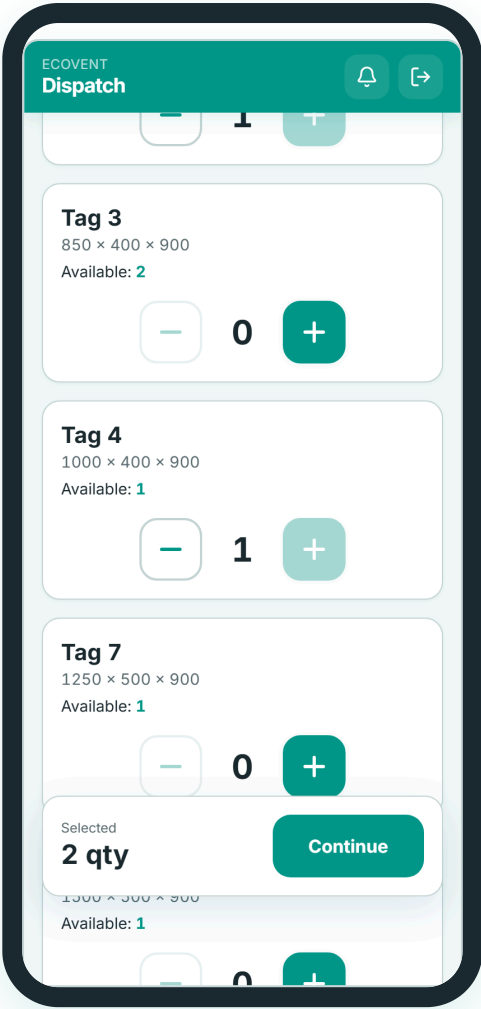

Orders — list of orders with balance ready to dispatch

Order detail — totals, balance, and New Dispatch Trip button

Select tags — large 56px + / – buttons with sticky Continue bar

Vehicle details — driver, transporter, loading date and time

10. Status Reference

Dispatch Trip Status

Status	Colour	Meaning
Loading	Orange	Vehicle being loaded
Loaded	Blue	Loading complete
Dispatched	Blue	In transit
Delivered	Green	Received at site

Order Balance (on Orders list)

Field	Meaning
-------	---------

Balance	Quantity still to dispatch (orange)
Dispatched	Already sent on previous trips (green)
Total	Full order quantity

Relationship to Admin Portal

Dispatches created on mobile appear instantly in the web portal under **Dispatch**. Production and enquiry workflows remain on the admin portal only.
